

ICT ANNOUNCES FAST SHIP PROGRAM

Reduced Lead Times & Increased Product Stock Levels Provide Faster Delivery to Your Customers

When it comes to serving your customers, we know that fast, consistent availability is one of the key factors in winning and keeping business.

ICT has been working over the past several months to significantly increase our production capacity, as well as the amount of finished products we keep on the shelf. This means that the majority of ICT products can ship as soon as your order is received. Up to 80% of all orders we receive are now available to ship from stock.

Special, custom, and large project orders can typically be built and shipped from our factory in 15 business days or less. Recently our on time delivery for these orders has been over 98%.

All ICT products are designed and manufactured by us at our facility near Vancouver, Canada. This ensures that we not only maintain the high level of quality and reliability we are known for, but it also provides you and your customer with the assurance that their orders will consistently ship on time, with no surprises.

Please contact ICT at sales@ictcorporate.com or call us at +1 604 856 6303 for lead time inquiries.
